

Information Technology

AHEAD OF THE CURVE

Our technology lawyers understand not just the legalities of technology, but also the business drivers of technology and opportunities and risk in terms of its use and monetization. Many of our lawyers have a technology background which allows them to quickly assimilate new technologies and engage with our client's technical personnel. Clients and peers have recognized our expertise in industry surveys, including Who's Who Legal, Lexpert®, Best Lawyers, Expert Guides and Chambers Global.

We provide strategic advice and get deals done for our clients and do so in a way that allows them to capitalize on available opportunities as well as mitigate associated risks. Our technology lawyers accomplish this principally by identifying and clearly explaining how business opportunities and associated legal risks impact our client's business objectives. This requires consideration of not only the rules as they exist today, but also how existing principles will apply to such changes to identify novel risks or opportunities.

With lawyers across all areas of expertise, we can provide seamless advice from start to finish for corporate, commercial, litigation or intellectual property matters. We have worked on transactions of all sizes from advising tech start-ups in terms of the structuring of their business to representing multinational clients in large and complex outsourcing projects or technology acquisitions or divestitures. We have been blessed with the opportunity to work with our clients with respect to cutting edge technologies and are always eager to learn and expand our horizons in this regard.
